## Problem 1

A strain rosette is attached to a point on the surface of a pump as shown. The pump is made of steel. Due to the loading, the strain gauges give a reading of:
$\varepsilon_{a}=-250 E-6$
$\varepsilon_{b}=300 E-6$
$\varepsilon_{c}=-200 E-6$

Determine:
a) the complete strain state at the point,
b) the shear stress $\tau_{x y}$ at the point.

|  | Steel | Cupronickel | Aluminum |
| :--- | :--- | :--- | :--- |
| Young's Modulus | $30 \times 10^{6} \mathrm{psi}$ | $20 \times 10^{6} \mathrm{psi}$ | $10 \times 10^{6} \mathrm{psi}$ |
|  | $(210 \mathrm{GPa})$ | $(140 \mathrm{GPa})$ | $(70 \mathrm{GPa})$ |
| Shear Modulus | $11 \times 10^{6} \mathrm{psi}$ | $7.5 \times 10^{6} \mathrm{psi}$ | $4 \times 10^{6} \mathrm{psi}$ |
|  | $(80 \mathrm{GPa})$ | $(52 \mathrm{GPa})$ | $(28 \mathrm{GPa})$ |
| Coefficient of Thermal | $6.5 \times 10^{-6} 1 /^{\circ} \mathrm{F}$ | $9.75 \times 10^{-6} 1 /^{\circ} \mathrm{F}$ | $13 \times 10^{-6} 1 /{ }^{\circ} \mathrm{F}$ |
| Expansion | $\left(12 \times 10^{-6} 1 /{ }^{\circ} \mathrm{C}\right)$ | $\left(18 \times 10^{-6} 1 /{ }^{\circ} \mathrm{C}\right)$ | $\left(24 \times 10^{-6} 1 /{ }^{\circ} \mathrm{C}\right)$ |

## Problem 2

The circular aluminum rods $A B$ and $B C$ are attached to a rigid support at C and are initially unstressed. At room temperature (20C) a 1 mm gap exists between the end of the rod and the rigid support at A.
If the temperature is increased to 140C,
 determine:
a) the normal stress in the rod $A B$
b) the change in length of the $\operatorname{rod} A B$

|  | Steel | Cupronickel | Aluminum |
| :--- | :--- | :--- | :--- |
| Young's Modulus | $30 \times 10^{6} \mathrm{psi}$ | $20 \times 10^{6} \mathrm{psi}$ | $10 \times 10^{6} \mathrm{psi}$ |
|  | $(210 \mathrm{GPa})$ | $(140 \mathrm{GPa})$ | $(70 \mathrm{GPa})$ |
| Shear Modulus | $11 \times 10^{6} \mathrm{psi}$ | $7.5 \times 10^{6} \mathrm{psi}$ | $4 \times 10^{6} \mathrm{psi}$ |
|  | $(80 \mathrm{GPa})$ | $(52 \mathrm{GPa})$ | $(28 \mathrm{GPa})$ |
| Coefficient of Thermal | $6.5 \times 10^{-6} 1 /^{\circ} \mathrm{F}$ | $9.75 \times 10^{-6} 1 /^{\circ} \mathrm{F}$ | $13 \times 10^{-6} 1 /{ }^{\circ} \mathrm{F}$ |
| Expansion | $\left(12 \times 10^{-6} 1 /{ }^{\circ} \mathrm{C}\right)$ | $\left(18 \times 10^{-6} 1 /{ }^{\circ} \mathrm{C}\right)$ | $\left(24 \times 10^{-6} 1 /{ }^{\circ} \mathrm{C}\right)$ |

## Problem 3

A structure has a 90-degree elbow made of solid cylinder coming out of rigid wall. The radius of the solid cylinder is 2 cm . The forces are given in two directions, $F_{y}=100 \mathrm{~N}$ and $F_{x}=50 \mathrm{~N}$. (a) Determine the stresses on A presented in the picture. (b) Determine the complete stress state at the most critical location where yielding is most likely to occur.

## Problem 4

The beam whose dimensions and cross-section are also shown below is loaded with a distributed load and a concentrated load as shown below. Determine the maximum shear stress and the maximum normal stress in the beam.
